

## ◆ BASIC SQL PRACTICE

Assume a table **Students**

| <b>student_id</b> | <b>name</b> | <b>age</b> | <b>course</b> | <b>marks</b> |
|-------------------|-------------|------------|---------------|--------------|
|-------------------|-------------|------------|---------------|--------------|

1. Write a query to display all records from the `Students` table.
2. Display only `name` and `course` columns.
3. Find students whose `age` is greater than 20.
4. Display students who scored more than 75 marks.
5. List students enrolled in the **Computer Science** course.
6. Display students ordered by `marks` in descending order.
7. Find the student with the highest marks.
8. Count total number of students.
